

HONEYWELL DOLPHIN HAND HELD WIRELESS SCANNER

The HONEYWELL DOLPHIN hand held wireless scanner is an optional piece of equipment. You can purchase it at any time. The items you will need to purchase are:

- Dolphin Scanner \$1,110
- Wireless Router \$85 (You need a dedicated, wireless router for the Dolphin Scanner.)
- Mobile Printer \$729 (Optional item if you use Line Busting.)
- Receipt Paper for Mobil Printer – \$197 per case (72 rolls per case)
- Replacement Stylus Pen \$4.50 (Dolphin comes with one.)
- Spirits Dolphin Interface Software \$1,800
- Training classes are held at ASI's office.

The scanner is connected to the Spirits network via the wireless router. Your Spirits data is not stored in the scanner. The scanner dynamically reads the Spirits data from the server computer. As you use the scanner, it dynamically writes back data to the server computer.

There are several tasks you can accomplish with the HONEYWELL DOLPHIN

- **Count Inventory**
Initial inventory counting can be a time consuming project. The scanner can help you accomplish this task quickly and efficiently. And remember, inventory counting is something you do throughout the year. You can use the scanner for spot checks.
- **Price Changes**
The scanner can be used to make price change lists. Scan the item and enter the new price.
- **Price Labels**
The scanner can be used to create a label list.
- **Stock Check**
The scanner can be used to check current prices and stock counts. You can scan the item on the shelf and verify whether or not the shelf label has the correct price.
- **Line Busting**
You may have long lines at the register. You can go through the line of customers, scan the items in their shopping cart, print out a UPC label for that sale. When that customer gets to the register, you can scan that UPC label (if you have a mobile printer) or you can enter the UPC number. The items display on the register screen without you scanning each item. Now you can complete the sale.
- **Shelf Restocking Pick List Report**
You can walk around the store and visually see how many bottles are missing on the shelf. You can scan the UPC and enter the number of bottles you need to move to the shelf. You can print a Shelf Restocking Pick List on your office report printer and use this to restock the shelf.

As you can see, there are several reasons to invest in a HONEYWELL DOLPHIN. Call your salesperson today for more information.
